#### Suppliers of innovative solutions for ageing well: more procurement and tender opportunities with the HAPPI online platform

HAPPI, a European project coordinated by RESAH (*Réseau des Acheteurs Hospitaliers*), gathers health public procurers to work together in order to identify, evaluate and purchase innovative and sustainable solutions in the field of ageing well in health institutions. Next year, 6 European healthcare central purchasing organisations from France, UK, Italy, Belgium, Luxembourg and Austria will launch a joint call for tender to attribute one or several markets to the best innovative products and services. Ahead of the procedure, the HAPPI online platform, designed as a collection tool, will allow suppliers, preferably and in priority SMEs located within the European Union, to showcase their innovative solutions. Three Infodays (London 24 September, Paris 9 October and Turin 30 October) are organized for suppliers to learn how to use the online platform; HAPPI members will also be present to offer further information on the upcoming call(s) and on the project's benefits and objectives.
